Flovver: Period Tracker and Ovulation Calendar

Owner: **Guillermo**
Manager Approval: Yavier

BACKGROUND

- Menstrual cycles can be hard on women, especially communicating it and explaining it to their partners. Even though it can be difficult to communicate, it is important to keep track of this cycle, and for their partners to have the ability to access said information would be beneficial to the relationship.

CURRENT CONDITIONS

- There's a lot of couples that want to have children and a lot of couples that don't wish to have children, either way the menstrual cycle has important information regarding that.

- If a couple wishes to have children, it would be more logical to try for a child when the woman is more fertile (around 12-14 days before her next period for the average woman).

- With slight problems in communication due to a busy schedule or any other situation, it would be very useful for both partners to have access to the other person's cycle.

GOALS

- Period Tracker.
- Ovulation Tracker.
- Being able to access a cycle from two (or more) accounts for any S.O.'s or important people.
- Being able to share and sync cycles.

PROPOSAL

- We want to make an app that allows the user to track their menstrual cycles and their ovulation cycles. Along with this, we would like to make it possible to share the information with the people the user selects. We believe that with the help of an app that tracks it for the user, it would benefit a lot of women and their relationships.

PLAN

- First, we need to work on a UI which provides a working calendar.

- Work on the Algorithms that record and track the cycles to provide accurate results.

- Develop Username/Password System.

- Allow for other accounts (with permission) to see and/or edit other calendars and sync with other calendars.

- Customization of the app for personalization.

FOLLOW UP

- I find that the act of linking or sharing cycles might leave to some trouble.
- Irregular Cycles might be troublesome for the algorithms.
